CLAIM

- 1. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- 5 (a1) the hardness of the weld metal is not more than 110% of the hardness of the base metal.
 - 2. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- 10 (a2) the hardness of the weld metal is not less than 70% and not more than 110% of the hardness of the base metal.

- 3. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- (a1) the hardness of the weld metal is not more than 110% of the hardness of the base metal, and
- (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal.
- 4. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
 - (a2) the hardness of the weld metal is not less than 70% and not more than 110% of the hardness of the base metal, and
 - (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal.
 - 5. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
 - (a1) the hardness of the weld metal is not more than 110% of the hardness of the base metal,
 - (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal, and
- (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the non-heat-affected base metal has a

width not less than 5 mm.

- 6. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- (a2) the hardness of the weld metal is not less than 70% and not more than 110% of the hardness of the base metal,
 - (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal, and
- (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the base metal unaffected by heat has a width not less than 5 mm.
- 7. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
 - (a1) the hardness of the weld metal is not more than 110% of the hardness of the base metal,
- (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the base metal unaffected by heat has a width not less than 5 mm, and
- (d) the prior austenite grain size in the heat-affected zone (HAZ) contacting the welding fusion line is not more than 200 μm_{\star}
- 8. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- (a2) the hardness of the weld metal is not less than 70% and not more than 110% of the hardness of the base metal,
 - (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the base metal unaffected by heat has a width not less than 5 mm, and
 - (d) the prior austenite grain size in the heat-affected zone (HAZ) contacting the welding fusion

line is not more than 200 μm .

- 9. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- (a1) the hardness of the weld metal is not more than 110% of the hardness of the base metal,
 - (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal,
 - (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the non-heat-affected base metal has a width not less than 5 mm, and
 - (d) the prior austenite grain size in the heat-affected zone (HAZ) contacting the welding fusion line is not more than 200 μm_{\star}
 - 10. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance, is characterized by:
- (a2) the hardness of the weld metal is not less than 70% and not more than 110% of the hardness of the base metal,
- (b) the width of the weld metal is not more than 70% of the plate thickness of the base metal,
- (c) the width of the region affected by welding whose hardness is softened to not more than 95% of the hardness of the non-heat-affected base metal has a width not less than 5 mm, and
- (d) the prior austenite grain size in the heat-affected zone (HAZ) contacting the welding fusion line is not more than 200 μm_{\star}
- 11. A large-heat-input butt-welded joint of welded structures having excellent brittle fracture resistance according to any one of claims 1 to 10, is characterized by that the welded structures are prepared by butt-welding high-strength steel plates over 50 mm in thickness.
